

Are you ready for the Gypsy Moth?

The gypsy moth infestation is forecasted to be severe from north Haldimand through central West Lincoln to east Pelham. There are also smaller isolated infestations in NOTL, Niagara Falls & along the Lake Erie shoreline in Fort Erie. Come speak with experts, learn about this destructive insect, how it affects our trees and forests, the cost-effective methods of controlling the insect & the aerial spray program, using the biological insecticide, B.t., that is being organized to provide protection to those who participate. Our forests are a valuable resource and they need protection, particularly with the recent impacts from the Emerald Ash Borer & the subsequent loss of our ash trees.

INFORMATION & ORGANIZATION MEETINGS
